

Eclypt® Hardware-Based Encryption

Hard Drive Encryption for Protecting Top Secret through SBU Data-At-Rest

OVER ONE MILLION LAPTOPS GO MISSING IN THE U.S. EACH YEAR,¹ COSTING ORGANIZATIONS BILLIONS OF DOLLARS IN DATA BREACH.²

If data breach can happen to them, it can happen to you. »»» More and more computers are lost or stolen from government and commercial organizations each year, putting the nation's classified and sensitive data at risk for breach. Eclipt secure data-at-rest hardware encrypts data of any classification level from Top Secret to Sensitive, rendering the hard drive unclassified and protected from compromise. With hardware-based self-encrypting technology, Eclipt delivers higher security with better performance than software-based encryption. In the event of computer theft, loss, or attack, Eclipt ensures that your data is completely protected, secure, and unstealable.

With Eclipt hard drive encryption, your classified data is rendered unclassified when your computer is powered down, freeing you from logistics associated with storing and transporting classified data. Hardware-based Eclipt data encryption is available in a variety of configurations: Core internal hard drive, Freedom external hard drive, Nano ultra-portable memory stick, and Inline media encryptor. Simply choose the optimal Eclipt protection level and form factor to meet your data-at-rest security needs.

WHICH ECLYPT DEVICE IS RIGHT FOR YOU?

		CLASSIFICATION LEVEL		
Department of Defense Federal Government Law Enforcement	TOP SECRET	✓		
	SECRET		CONTACT VIASAT FOR MORE INFORMATION	
Local Government National Health Services Educational Institutions	CONFIDENTIAL		CONTACT VIASAT FOR MORE INFORMATION	
Enterprise/Corporations	UNCLASSIFIED			✓

↓ REDUCTION IN CLASSIFICATION LEVEL AND HANDLING REQUIREMENTS BY ENCRYPTION
 ✓ RECOMMENDED CHOICE

ECLYPT 800
 (AVAILABLE IN INLINE MEDIA ENCRYPTORS)

ECLYPT 600³
 (AVAILABLE IN CORE & FREEDOM)

ECLYPT 200
 (AVAILABLE IN CORE, FREEDOM, & NANO)

³Expected to be submitted for US government certification.

INSIDE YOUR COMPUTER

EMBEDDED DATA PROTECTION IN YOUR COMPUTER'S CORE

ECLYPT CORE INTERNAL HARD DRIVES

Direct encrypted replacement for a standard computer internal hard drive.

- » **Core 600*** - Contact ViaSat for more information
(*Expected to be submitted for US government certification)
- » **Core 200** protects your sensitive (unclassified) data with premium encryption

KG-200 WORKSTATION INLINE MEDIA ENCRYPTOR

Positioned between a computer's processor and hard drive, this Eclypt device protects data-at-rest on classified desktop and server computers.

- » **Protects US Top Secret & Below; NSA certified**
- » **Encryption renders the disk drive unclassified**
- » **Protection level Eclypt 800**

OUTSIDE YOUR COMPUTER

THE FREEDOM TO WORK ON THE GO AND SWITCH COMPUTERS WITH PORTABLE DATA PROTECTION

ECLYPT FREEDOM EXTERNAL HARD DRIVES

Direct encrypted replacement for a standard computer internal hard drive.

- » **Freedom 600*** - Contact ViaSat for more information
(*Expected to be submitted for US government certification)
- » **Freedom 200** protects your sensitive (unclassified) data with premium encryption

ECLYPT NANO USB MEMORY STICK

Encrypted USB memory stick delivers AES-256 full-disk encryption and MIL-STD 810F rugged, waterproof performance in a portable thumb drive.

- » **Protects sensitive (unclassified) data**
- » **Protection level Eclypt 200**

KG-201 PORTABLE INLINE MEDIA ENCRYPTOR

External device that houses and encrypts any 2.5" ATA-6 classified hard drive, and connects via USB to your laptop.

- » **Protects US Top Secret & Below; NSA certified**
- » **Encryption renders the drive unclassified**
- » **Protection level Eclypt 800**
