

# Go-anywhere *Flex*

High-speed, mobile connectivity

## Go-anywhere Flex is a Ka-band VSAT service offering mobile, high-bandwidth connectivity, optimized for land applications.

Go-anywhere Flex consistently achieves throughput of 10Mbps and above. It is delivered through our unique capacity-optimized Ka-band constellation which uses targeted beams to maximize efficiency and throughput of our assets – meaning optimal performance and reliability for every application.

As the 'rapid response' option of the satellite world, Go-anywhere Flex has configurations to cover almost every need – including terminals small enough to fit in a suitcase, all the way up to fixed terminals as large as 1.8m in diameter. Whatever your application, Go-anywhere Flex keeps its promises.

### Features

#### Pack and go portability:

Go-anywhere Flex terminals are available in a range of formats to meet your business requirements, from compact units that fit in airline luggage and can be deployed by one non-technical person, through to larger permanent reflectors.

#### Optimized for business:

throughput and airtime plans designed for corporate humanitarian land-based applications.

#### Choice of terminals:

Go-anywhere Flex features a defined Committed Information Rate (CIR) – satellite bandwidth devoted to you, so you're assured of service without contention.

### Benefits

**Unified experience:** Look after your users with a common experience across the globe – pull up, set up and beam up.

#### L-band backup reliability:

With optional dual constellation service, our versatile Ka-band service can be backed up for moments of rare lack of service with virtually unlimited L-band cover, so even the most remote and challenging locations can stay connected.

#### Flexible, tailored plans:

Get satellite hardware and airtime from as little as one week to 12 months for every business need.

### In action

#### Use cases

- › Aid and NGO rescue deployments
- › Plug-and-go major events coverage
- › High quality live video broadcasting and streaming for media applications
- › Flexible, high bandwidth comms in remote mining and construction scenarios
- › Rapid connectivity to support infrastructure recovery

#### Industries

- › Aid and NGO
- › Mining
- › Media
- › Utilities
- › Oil & Gas

High-speed, mobile connectivity

## Service plans

### › Go-anywhere Single SIM Plans

These plans are made to suit your own needs with an individual price for each Go-anywhere Pro service component. Each plan comes with a monthly subscription and allowance and we charge for the real usage per service component (e.g. background IP, streaming, SMS etc...).

### › Go-anywhere Link

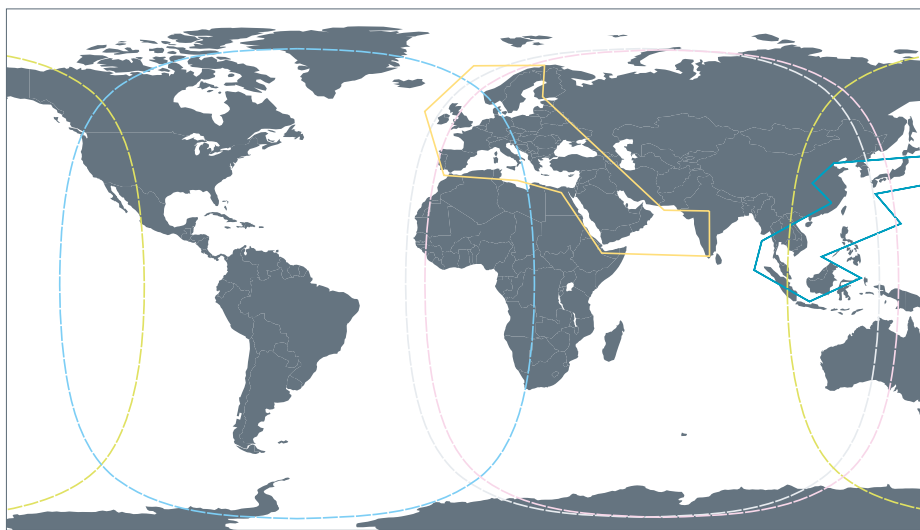

This service is designed to offer a credible and competitive alternative to certain Ku-band service offerings, and provides monthly usages at compelling subscription rates. Go-anywhere Link allows full in-country mobility on existing and new plans to increase use case applicability in areas of low capacity utilisation, but important Enterprise markets. Plans include 2.5GB, 5GB, 10GB and 30GB monthly rates, with the option to use data on an all you can eat basis.

### › SCAP (Shared Corporate Allowance)

These plans will typically facilitate allowance sharing across a number of SIMs within a single corporate entity, reducing the risk of service waste. All applications must receive approval from Viasat before the package can be made available to customers or partners.

For a full range please contact your Viasat Account Manager.

## Coverage map

For illustrative purposes only. Coverage is approximate and subject to change. Not representative of any single product or service.

**Frequency:** Ka-band

**In-brief:** Easy-to-use VSAT with IATA-approved check in luggage options

**Customer issue:** High speed data requirement deployable globally

**Speed (indicative maximum):**  
Up to 10Mbps up and down

**Power consumption:** High

**Network availability:** Up to 99%

**Mobility:** Static, on the pause

 Internet and intranet access

 Email and file transfer

 Video conferencing

 Live video / audio, broadcasting

 Telephone and SMS

 Push-to-talk (PTT)

 Secure VPN

 Encryption

 WAN

 VoIP and remote GSM

 Telemetry and GPS
