

 Voice & PTT

# IsatPhone 2

Reliable and ruggedized voice calling

## The IsatPhone 2 satellite phone helps keep you connected with voice and text communications in the most remote parts of the world.

Trusted by explorers and engineers alike, IsatPhone 2 is the first name in mission-critical handsets. Using Viasat's L-band network, the IsatPhone 2 gives you high-quality voice communications and up to 99.9% coverage in all but the most polar latitudes. It's reliable, rugged and robust, but also ergonomic and easy to use; and with fast network registration, it'll be there when you need it most. With 45-hour standby time and eight hours of active talk-time, it's also built to work the same shifts you do.

As well as the features you'd expect as standard (voicemail, text messaging, Bluetooth), the IsatPhone 2 also supports incoming call alerts even with the antenna stowed – so you never miss a vital call. It also features location tracking, inbuilt access to GEOS emergency assistance and a one-touch support mode to send your GPS location data to a pre-set emergency number.

### In action

#### Use cases

- › Employee safety scenarios
- › Disaster response
- › Nomadic lifestyles
- › Outdoor recreation

#### Industries

- › Aid and NGO
- › Expeditionary
- › Government
- › Mining
- › Oil & gas

### Features

**Global Coverage:** Connect securely, almost anywhere in the world on our highly reliable L-band network.

**Long life:** Talk time of 8 hours on one charge, standby 45 hours.

**Fast network registration:** Get connected in under 45 seconds.

### Benefits

**Ruggedised for harsh environments:** Dust, splash and shock-resistant, readable in bright sunlight.

**Viasat authority:** Licensed for use in the majority of countries globally.

**Simple to operate:** Minimal training required, familiar natural phone interface in a crisis.

**Emergency Assistance:** direct access to the worldwide GEOS emergency assistance network.

## Service plans

### Single subscription plans

- › Each plan features a monthly base subscription which includes a maximum usage allowance against which you will be charged only for the real usage per service component (e.g. background IP, streaming, voicemail, SMS etc.).
- › Besides individual service prices, the service components are also available via pre-defined subscription packages with set minimum contract terms.
- › There are minimum durations and billing increments applicable to all traffic types.
- › Options include pre-paid and post-paid packages.

### Shared corporate allowance (SCAP) plans

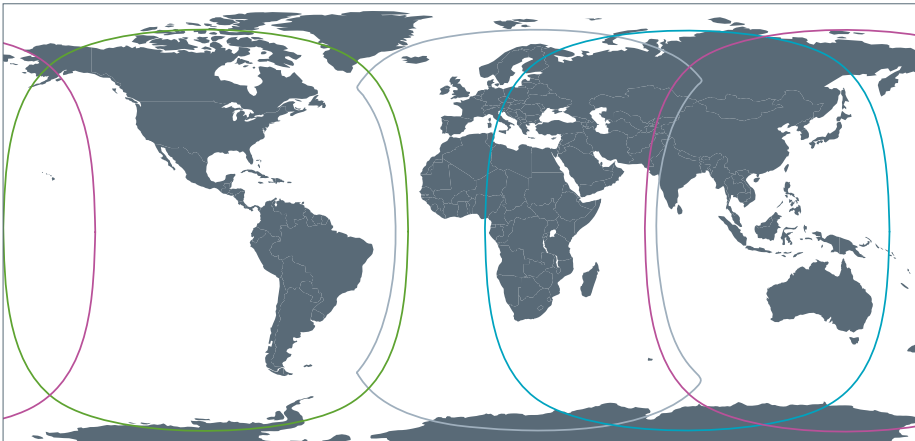

- › SCAP plans allow corporate entities to purchase a group of SIMs which then share a monthly, inclusive allowance. This allows variance in usage across individual SIMs, reducing the risk of service waste. All applications must receive approval from Viasat on a "fair use" basis before the package can be made available to customers or partners.

### Regional SIMs

- › We also offer regional specific packages to meet the needs of end users only requiring regionally localized coverage.

For a full range please contact your Viasat Account Manager.

## Coverage map

For illustrative purposes only. Coverage is approximate and subject to change. Not representative of any single product or service.

**Band:** L-band

**Power consumption:** Low

**Customer issue:** Need for voice comms outside of cellphone coverage
