

# Sovereign solutions for government.

## You stay in control.

### Viasat's sovereign solutions put you in control — on your terms.

Our sovereign by design solutions help you govern your data and command your networks across space and terrestrial domains.

With policy-driven control, assured connectivity, and built-in security, Viasat enables you to operate confidently, maintain sovereignty, and meet your objectives — anywhere in the world.

### Take governance of your:

Data

Security

Access

Outcomes

### What is sovereign by design?

Enablement of nations and coalitions to exercise governance over their data — even when partnering with Viasat as a global provider. We enable host-nation control points without requiring single-nation ownership of the entire stack.

- › Globally resilient
- › Coalition-ready interoperability
- › Operator-centric and automated
- › Multiple encryption options
- › Open and extensible

### Sovereign by design for:

Defense operations with coalition partners

Crisis response and humanitarian relief

Arctic and remote operations

Critical national infrastructure protection

National / regional PNT enhancement

### Global reach. National control.

Governance reaches across borders, networks, and domains with:

Multi-orbit, multi-network connectivity | Arctic-to-equator coverage | High-latitude continuity
