

SECURITY ASSESSMENT SERVICES

Customizable, holistic approach
to information security

Cybersecurity threats are growing faster, more frequent, and more sophisticated. Quickly identifying, mitigating, and preventing attacks is critical to keeping networks operational and data secure.

For over 30 years, Viasat has provided premier cybersecurity and information assurance solutions to the U.S. Government, critical infrastructure, and commercial networks. As a global satellite ISP, we analyze data across our network to help protect against billions of cyber threats daily, delivering expert-level security solutions, comprehensive vulnerability assessments, and penetration testing tailored to your needs.

Your partner for success.

Expert Guidance

Recognized experts in the security arena with over 130 in house security professionals including Network Security penetration testing and vulnerability analysis

Network Security

Deep understanding of security challenges with Information Technology Networks

Proven Standards

Industry standards-based approach

Affordable Protection

Cost effective vulnerability assessments and penetration tests

Easy for you. Challenging for the attacker.

- › **Human Intelligence + Automation:** We go beyond automated tools to deliver custom assessments that reveal how attackers view and target your network.
- › **Tailored Building-Block Framework:** Every engagement is customized to address the specific threats, risks, and goals of your business.
- › **Seamless Security Experience:** Our team handles the heavy lifting, giving you actionable, cost-effective insights without operational hassle.

APPROACH AND METHODOLOGY

Building-block approach:

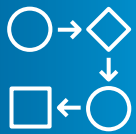

Penetration Testing

Core Defense & Compliance

Our penetration testers conduct thorough inspections across your environment, personnel, and processes to uncover critical gaps before adversaries do.

Capabilities: Web & Mobile Apps, Internal/External Networks, Wireless, Vulnerability Scanning, CIS Controls Audits, Reconnaissance, and Threat Modeling.

Deliverable: Comprehensive reporting tailored for both executive and technical audiences, providing actionable steps to improve your posture.

Advanced Testing

Deep Threat Identification

Designed for mature security teams and previously hardened environments. We evaluate how effectively your active defenses detect and mitigate sophisticated, existing threats.

Capabilities: Lateral Movement, Assumed Compromise Testing, Social Engineering, Physical Pen Testing, Hardware/Firmware Analysis, and Incident Response Table-Top Exercises.

Collaborative Testing

Purple Team Optimization

Work directly alongside our experts. We leverage automated workflows and the MITRE ATT&CK® framework to measure, tune, and validate your detection systems against real-world adversary tactics.

Capabilities: Purple Team Operations, MITRE ATT&CK® Coverage Mapping, and Detection System Validation & Tuning.

Red Team Operation

Full Attack Simulation

The ultimate test of your incident response capability. Our team launches covert campaigns emulating nation-state threats (APTs), using advanced stealth and evasion techniques to achieve real-world objectives.

Capabilities: Full-Scope Adversary Emulation, APT Campaign Simulation, Evasion & Stealth Assessment, and Response Readiness Stress-Testing.
