Network Management Senior Developers

Job Responsibilities:

This position requires a mature engineer who has wide experience solving a variety of software problems, ideally in an OSS or network management context. Familiarity with the business drivers of consumer networks and/or satellite network technologies is a big plus. The ideal candidate will have 4 or more years of experience developing highly reliable network management applications with a history of adapting open source solutions to technical problems in the telecommunications space. Java and Python are the languages of choice in this environment.

Requirements:

- 4+ years of J2EE and/or Python development experience in NMS domain.
- Good object oriented design skills.
- Experience working in agile environments.
- NMS/EMS and/or event-driven programming background.
- Experience on SNMP development.
- Experience implementing open source based solutions.
- Team orientation with excellent communication skills.
- Bachelor’s Degree in an Engineering discipline (Computer Science, Electrical Engineering, etc.).
- Travel up to 10%

Preferences:

- Knowledge of Python is strongly preferred.
- Test-driven development/CI/CD skills.
- Deployment experience in an operational network.
- Familiarity with satellite networks.

About ViaSat:

ViaSat specializes in engineering creative ways to connect consumers, enterprises, and governments to communication applications that improve productivity, quality of life – and even safety – when terrestrial networks are not practical, cost effective, or able to provide a high-quality service. Because of the big leaps we make in performance, speed, bandwidth economics, and security, the Company has won numerous awards for its innovation leadership.

We have assembled one of the broadest portfolios of technologies in the industry, providing our technical staff with the ability to innovate at every possible point of the systems they create. Opportunities include wireless networking, cloud systems, software, hardware, and cybersecurity. We are seeking to add to our knowledge base by hiring only the best and the brightest.
ViaSat Global Facts:

- ViaSat was founded by three engineers, Mark Dankberg, Mark Miller, and Steve Hart. Dankberg is the Chairman and CEO, and Miller and Hart are Chief Technology Officers.
- ViaSat was incorporated in 1986 and is headquartered in California.
- ViaSat began trading as a public company on the NASDAQ Stock Market in December 1996 under the symbol VSAT.
- Over 3,700 employees worldwide.
- FY15 Revenue $1.4B.

ViaSat operates from Chennai, India. Please send your resume to jobs.india@viasat.com and we will contact you back!
